

# Beta Glucan - Nature's Secret

Natural products useful in preventing or treating disease have been highly sought after throughout human history. Polysaccharides in general, and beta glucan in particular, have a long history as immunomodulators. While polysaccharides have been used for decades in several countries to fight cancer and to stimulate defense system, only in recent years they have become a focus of intensive studies. Since the first direct scientific studies, countless animal as well as human trials have shown remarkable anti-tumor activity against a wide range of different tumors including breast, lung, and gastrointestinal cancer. In Japan, beta glucan is already licensed as an immunostimulant effective in cancer treatment. Two types of beta glucan have successfully been used since the 1980s as traditional medicine for cancer therapy in Japan and China. In addition, numerous clinical trials are currently under way, both in the United States and in several European countries.

But beta glucan has much more to offer and can be beneficial against:

- Chronic diseases
- Irradiation and/or chemotherapy
- Infectious diseases
- High cholesterol
- Diabetes
- Wound healing
- Nonspecific stimulation of defense reactions

**Dr. Vaclav Vetvicka, Ph.D.**

is a Professor of Pathology at the Department of Pathology of the University of Louisville in Louisville, Kentucky. In addition to the glucan research, Dr. Vetvicka help to launch glucan in several countries including USA, France, Turkey and Czech Republic. Dr. Vetvicka is author and co-author of more than 190 peer-reviewed publication and 7 books.
